

Code typed inside code environment:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end
```

And `@time f(x) = x + 1` is an example of inline code.

Including code with codefile:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end

Base.@kwdef struct UnicodeChars
  π = 3.1415
  ε = 1.0
  Φ = √2
end
```

Including code with codelink:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end

Base.@kwdef struct UnicodeChars
  π = 3.1415
  ε = 1.0
  Φ = √2
end
```
