Code typed inside code environment:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end
```

And @time f(x) = x + 1 is an example of inline code.

Including code with codefile:

```
struct MyType 
 a :: Int64 
end 
function f(x :: MyType) 
 x.a + 1 
end 
Base.@kwdef struct UnicodeChars 
 \pi = 3.1415 
 \varepsilon = 1.0 
 \Phi = \sqrt{2} 
end
```

Including code with codelink:

```
struct MyType 
 a :: Int64 
end 
function f(x :: MyType) 
 x.a + 1 
end 
Base.@kwdef struct UnicodeChars 
 \pi = 3.1415 
 \epsilon = 1.0 
 \Phi = \sqrt{2} 
end
```
