Code typed:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end
```

And `@time f(x) = x + 1` is an example of inline code.

Including code with `codefile`:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end
```

Including code with `codelink`:

```
struct MyType
  a :: Int64
end
function f(x :: MyType)
  x.a + 1
end
```
